Inventory Control with ERP

Inventory control is a challenging part of business management. Keeping track of stock from the moment it enters your business through to the final sale is nearly impossible without the right software.

Enterprise resource planning (ERP) systems generally promise inventory control, but rigid software can become an inconvenience to businesses that have uncommon stock trade.

QBCon Says:

An ERP system should have all the modern features and functions required to efficiently run your business.

Outdated ERP systems can put off users, and hamper attracting new business. Finding experts to support outdated ERP systems can be hard when they need to work on an ERP system that does not support the latest technologies.

ERP Blog

QBCon knows looking for more information on software solutions, especially Enterprise Resource Planning (ERP) systems, can cause confusion. This **ERP blog** aims to share advice and experiences between QBCon and you as researcher. QBCon has over 10 years' experience in custom developed ERP systems. We've developed and customised ERP solutions for companies in the agricultural-, retail- and manufacturing- industries. We believe ERP solutions will become much less complicated as this blog grows.
