Departmental ERP

Most organisations are comprised of different departments. Successful organisations understand that each department requires a unique set of tools to perform to the best of its ability. One of the most important tools departments rely on to increase productivity is an effective software solution. [Read more...](#)

ERP Blog

QBCon knows looking for more information on software solutions, especially Enterprise Resource Planning (ERP) systems, can cause confusion. This **ERP blog** aims to share advice and experiences between QBCon and you as researcher. QBCon has over 10 years' experience in custom developed ERP systems. We've developed and customised ERP solutions for companies in the agricultural-, retail- and manufacturing- industries. We believe ERP solutions will become much less complicated as this blog grows.

QBCon Says:

An ERP system older than five years should be upgraded.

Unlike other products, ERPs don't come with an expiry date. But QBCon suggests that once the five year mark has been reached, the system should be re-evaluated to establish if it can still support the company's needs. With over 10 years' experience in implementing ERP systems at companies such as the Agricultural Research Council (ARC), AFGRI and Woermann and Bröck, QBCon has identified these signs that indicate your system has run its course:

- A lack of support and maintenance from the vendor
- A need for customisation
- No room for improvements, such as web interface and business intelligence upgrades
