Lookout For The Hidden Costs When Implementing an ERP

Many companies that invest in Enterprise Resource Planning (ERP) systems expect better business processes, increased productivity and greater profit margins. Although a good ERP system can offer all of these benefits, companies are not realistic about the financial implications of the installation. **Read more...**

QBCon Says:

The basic definition of enterprise resource planning (ERP) is changing. Business solution provider QBCon developed Enterprise, an ERP system that transcends the traditional expectations of ERPs. QBCon believes an ERP should not only organise the internal processes of your company, it should be web-enabled and adapted to existing business strategies.

ARCHIVE: AFGRI Expands Functionality With Branch Server Deployment

Afgri, the diversified agricultural supplier with an income of R5,5 billion a year, is changing the way it manages its enterprise resource planning (ERP) in its flagship retail outlets. This is to gain greater business continuity in areas with poor or unstable connectivity. **Read more...**

ERP Blog

QBCon knows looking for more information on software solutions, especially Enterprise Resource Planning (ERP) systems, can cause confusion. This **ERP blog** aims to share advice and experiences between QBCon and you as researcher. QBCon has over 10 years' experience in custom developed ERP systems. We've developed and customised ERP solutions for companies in the agricultural-, retail- and manufacturing- industries. We believe ERP solutions will become much less complicated as this blog grows.
