Customisation Key to FDA's Software Success

The Food and Drug Assurance (FDA) Laboratory is eagerly anticipating the installation of a fully customised laboratory information management system (LIMS) from QBCon.

To replace their existing time-consuming manual reporting system, FDA approached business solution provider QBCon to custom develop a computerised reporting- and laboratory management system. QBCon customised their standard LIMS system to meet the unique needs of FDA. [Read more...](#)

LIMS Blog

Laboratory Information Management Systems (LIMS) are still underrated by many laboratories. QBCon created a LIMS blog to bring across how pivotal a good LIMS system is to the successful running of a laboratory. We

will also aim to answer all your queries relating to laboratory management software. To view the LIMS Blog [click here](#).

Did You Know?

With QBCon's state of the art biometric system each user can access Lab-i through fingerprint identification. This means users don't have to go through the tedious username and password routine every time they want to gain access to the system. With the biometric system each user can be held fully accountable for all activity on Lab-i.

QBCon will showcase its unique and fully customisable laboratory information management system Lab-i at this year's Lab Africa exhibition.

QBCon will demonstrate how Lab-i can simplify your laboratory systems, increase productivity and save you money.

Join us at Lab Africa from 2 - 4 June 2009 at the Dome in Randburg.

Archive: QBCon Lab-i Causes Uproar

The first commercial version of QBCon Lab-i, released during the last quarter of 2005 is reaching new heights. Local Laboratories are welcoming QBCon Lab-i into the market because it set out to solve many paper trail headaches within this sector. [Read more...](#)
